

# BlackLine Products

## Transaction Matching

BlackLine clients automatically reconcile hundreds of millions of transactions each month with the Transaction Matching product.

### SPEED

BlackLine matches millions of transactions each minute, so you can shorten your close, eliminate tedious manual labor, and get more out of your accountants.

### EXCEPTIONS

Quickly identify and address exceptions in any matching scenario, regardless of file format, data quality, or volume.

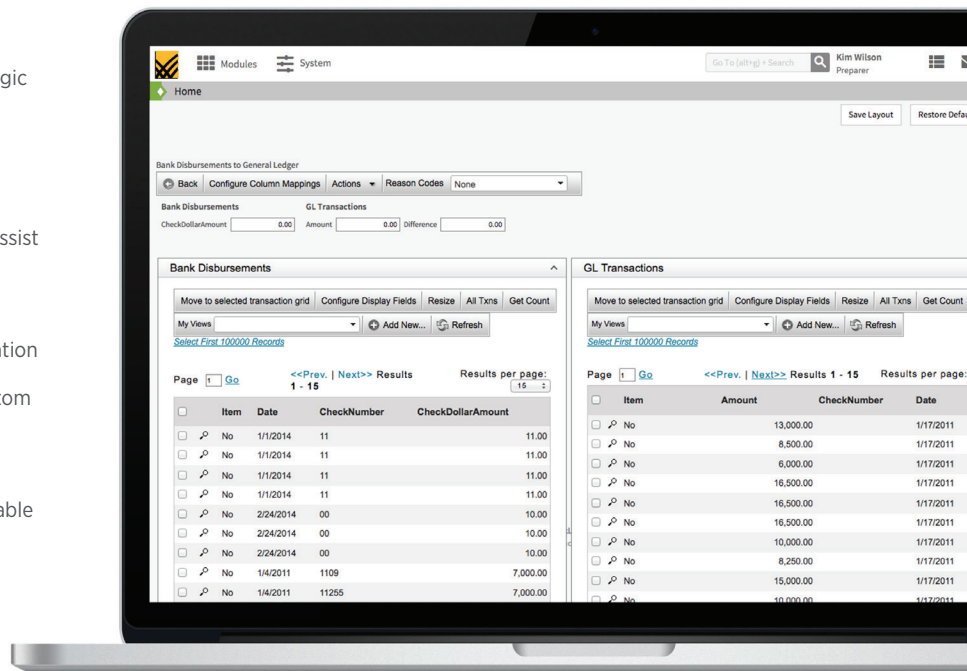

### FLEXIBILITY

BlackLine's user-defined, logic-driven process lets you automate any cash, credit card, intercompany, or other high volume reconciliation.

## Product Features

- **Configurable, rules driven process** in which all logic is owned by the business users
- **Create one-to-one**, many-to-one, and many-to-many matches
- **Email alerts** and a role based workflow process assist with exception handling
- **Create automatic or suggested match types.** Assign configurable reason codes for journal creation
- **Perform look-ups**, concatenation, parsing or custom data manipulation automatically with BlackLine's import utility
- **Automatically import information** from any editable file format or data source
- **Create reconciling items** and adjusting journal entries in bulk based on user-defined logic

“That transaction matching [product] reduced a key account reconciliation, a bank recon, from 30-person days down to 3-person days.”

- Blue Cross Blue Shield of Tennessee - Michael Woodard, Manager of Financial System Support

The screenshot shows the Blackline Transaction Matching software interface. It features a top navigation bar with a search function and user information. The main area is divided into several sections:

- 1. Match:** A menu option for manually matching transactions.
- 2. Create Item:** A menu option for creating new items or adjustments.
- 3. MyViews:** A section for managing custom views of the data.
- 4. Reason Codes:** A dropdown menu for selecting or defining reason codes for transactions.
- 5. Filter & Search:** A section for filtering and searching through the transaction data.
- 6. Role Assignments:** A section for managing workflow approvals and roles.
- 7. Data Sources:** A table showing various data sources and their match statistics.

The interface includes two main data grids: 'Bank Disbursements to General Ledger' and 'GL Transactions'. Both grids have columns for Item, Date, CheckNumber, and CheckDollarAmount. The 'Bank Disbursements' grid shows transactions from 1/1/2014 to 1/24/2011. The 'GL Transactions' grid shows transactions from 1/17/2011 to 1/17/2011. A 'Match Statistics' table is also visible, listing data sources like 'A SWIC Transfer Out RLO' and 'Bank' with corresponding match counts and percentages.

#### 1. Match

Users can manually match transactions. Manual matches can be made subject to a workflow approval process.

#### 2. Create Item

Required adjustments or timing items can be quickly created and moved to a reconciliation.

#### 3. MyViews

Create and save custom views of your data for ease of research.

#### 4. Reason Codes

User-defined reason codes allow you to quickly organize and report on millions of matched transactions or exceptions.

#### 5. Filter & Search

All data can be quickly filtered and/or searched by users in order to identify exceptions or potential manual matches.

#### 6. Role Assignments

Standard workflow approval process ensures you maintain control over your high-volume reconciliations.

#### 7. Data Sources

Automatically import and match on any data types. Matching scenarios can include any combination of data sources (as few as one with no upper limit). You can also filter a data source down to ensure you're targeting the right data.
